

Notice on establishing new business pillar **~JSP Advanced Solutions~**

JSP EMEA launched a new business pillar JSP Advanced Solutions on 1st June, 2024, for the purpose of delivering innovative industrial digital applications, which will help our customers to build competitive advantages, making manufacturing of moulding parts ready for the future and strengthening the differentiation of expanded polypropylene beads.

Reason for establishing new business pillar

JSP EMEA has continuously pushed the boundaries with expanded particle foams, so the emergence of industrial connectivity, datafication, automation and digitalisation came up as the next natural direction. The global trends in manufacturing show an increased demand for solutions supporting digital transformation (or Industry 4.0), which includes connectivity, communication and data platforms for smart manufacturing, real-time data access, advanced analytics (including machine learning) and artificial intelligence.

JSP EMEA has invested time and effort in developing useful industrial solutions to contribute to a more effective, resourceful and sustainable manufacturing. We collaborated with partners and organisations to establish practical tools for machine and equipment connectivity and data standardisation. Advanced Solutions support decisions and actions using real-data analytics, leading to faster process optimisation, equipment effectiveness and energy efficiency. Our solutions are based on a combination between JSP EMEA's distinctive knowledge and experience in industrial manufacturing and new skills and capabilities in cutting edge digital technologies.

With years of solid relationships with our customers, we are aware of the challenges and opportunities related to digital transformation. Therefore, we decided to offer advanced solutions to customers who not only seek immediate benefits but also long-term growth aligned with sustainable goals. We want to deliver solutions with the highest standards of cybersecurity and data confidentiality and ensure smooth integration and adoption of solutions with adequate trainings and support. In the future we aim to find synergies with machine learning (ML) and artificial intelligence (AI) technologies.

Robert Pluska, Managing Director of JSP Advanced Solutions, will bring profound experience between manufacturing processes, software applications and technical support to our customers. The launch of JSP Advanced Solutions is aligned with our long-term strategy and essential to transform manufacturing and set new standards in the industry.
